

V-SPORTS

LIGHTPAPER

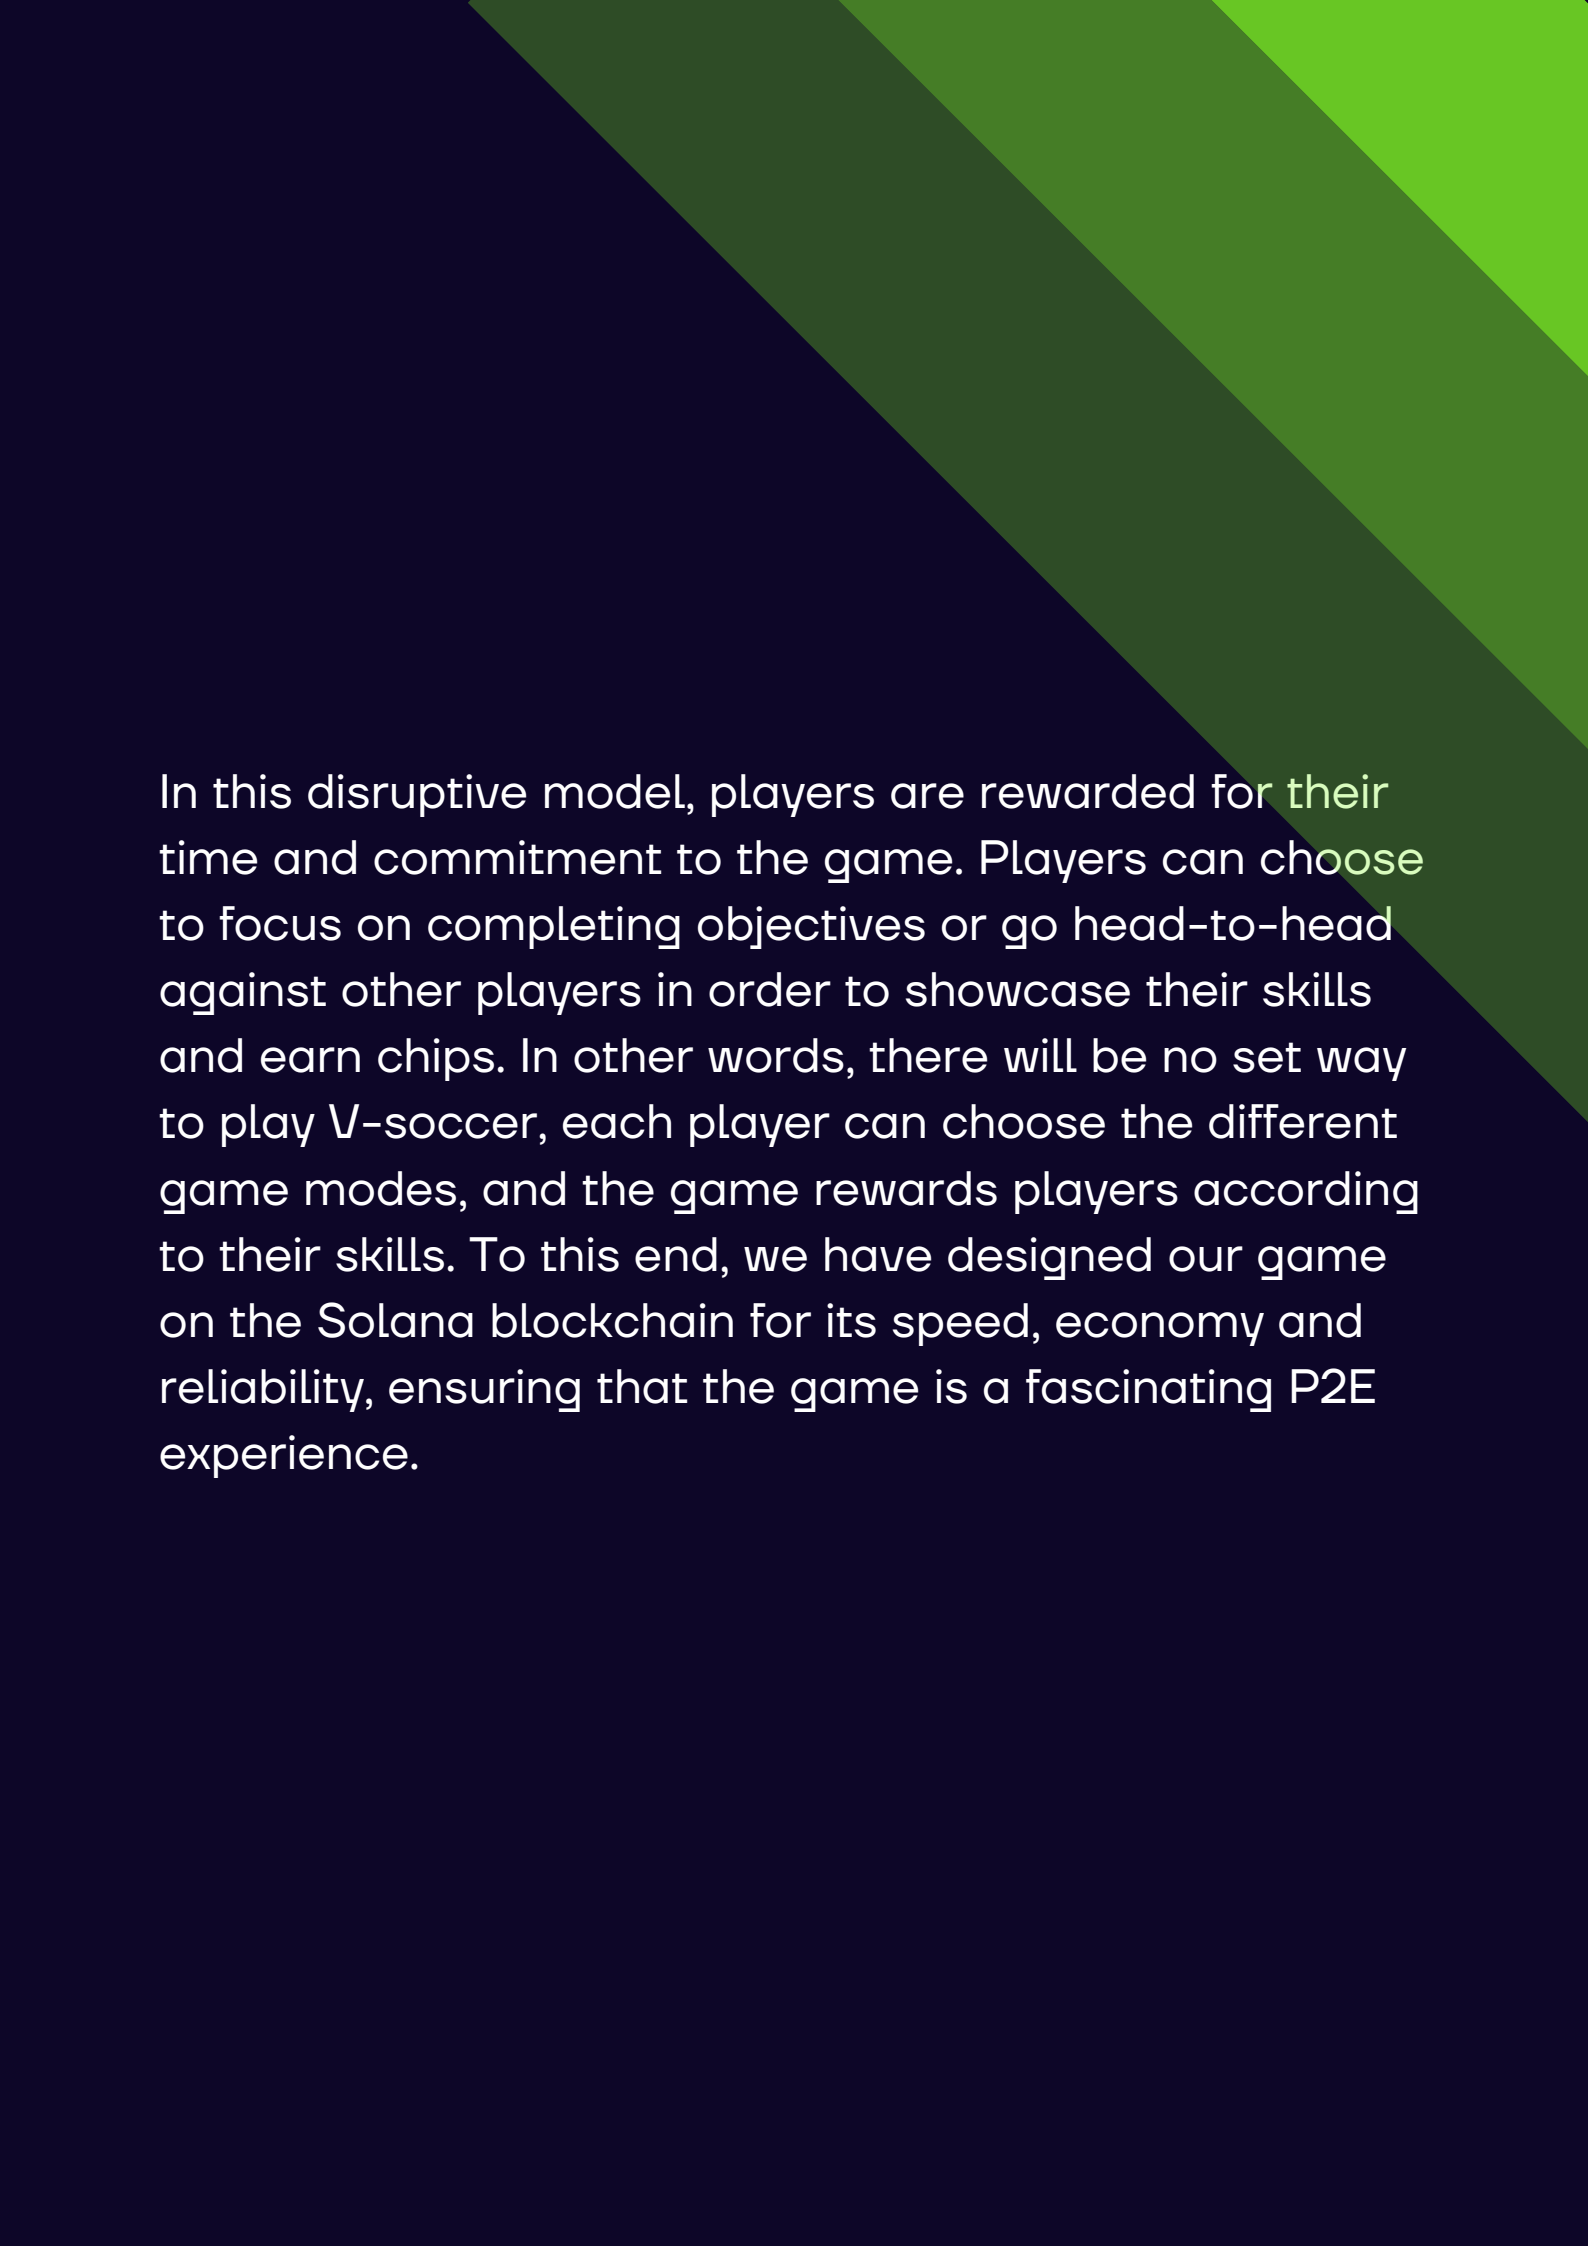

ABSTRACT

REVOLUTIONIZE the way you interact with your blockchain assets. As one of the first NFT-powered play-and-earn gaming platforms built on the Solana blockchain, V-SPORTS has combined the best of both worlds into a single integrated game where you can actually own unique in-game assets in the form of NFT.

V-sports is an integrated multiplayer NFT gaming ecosystem with unique P2E elements. Our ecosystem is designed with a game loop and reward system that has a high level of detail and complexity with P2E at its core.

Our first season, V-soccer, is a multiplayer role-playing game in which players can own and trade their NFT assets (e.g. characters, celebrities, powers, stadiums) and, through them, be able to play the various modes we offer on our platform. The project promises unique artwork, unique and detailed in-game system design and is executed by an experienced team with solid credentials.

V-sports presents an exciting opportunity for you to discover unique collectibles and be rewarded for your play time, all while harnessing the power of decentralization and blockchain ownership that blockchain technology provides. Each V-sport NFT in your collection is 100% owned by you and gives you a way to interact with the game world we've carefully constructed. First and foremost a game,

In this disruptive model, players are rewarded for their time and commitment to the game. Players can choose to focus on completing objectives or go head-to-head against other players in order to showcase their skills and earn chips. In other words, there will be no set way to play V-soccer, each player can choose the different game modes, and the game rewards players according to their skills. To this end, we have designed our game on the Solana blockchain for its speed, economy and reliability, ensuring that the game is a fascinating P2E experience.

HISTORY:

We started as Internet kids armed with a love for video games. We have turned our passions and struggles into a global creative engine that has been part of defining gaming culture.

V-SPORTS is at the center of gaming, sports, and culture, challenging how the next generations will consume, play, and buy.

We created our own ecosystem through blockchain technology, where users can get chips while having fun playing.

We are a company dedicated to NFTS Play-And-Earn, games focusing on sports. We are going to release several collections, the first one is based on Soccer, World Cup with a number of 4,416 NFTS players.

We seek to recover the traditional fashions of global games. First stage "HEAD SOCCER", simple, entertaining and easy to play game.

NFT COLLECTION

In the first season of WORLD CUP there will be 4000 NFT's, all the players that participate in the WORLD CUP with 3 different backgrounds, bronze, silver and gold.

The game has a free version where you can try it without having a V-sport NFT, but only with 2 players and 2 goal matches.

Users who have a Vsport NFT have the full package, where you can play our Campaign Mode which is against the machine, with different levels where prizes are unlocked. And through the versus, where you can challenge an opponent to play a certain amount of chips and the winner takes all.

The NFT has an amount included to play with the option to recharge it through crypto or by credit cards.

V-sports NFT holders will have the opportunity to whitelist on upcoming seasons such as UEFA CHAMPIONS LEAGUE and other sports like the NBA.

UTILITIES:

By having a V-SPORT NFT, you will have different utilities;

You will have a unique piece of art, which you can exchange and resell in secondary markets,

You can put the NFT in training mode (staking) on certain days with different reward options.

You can play the full version for free with friends, play through the online mode or the Campaign Mode where you can have rewards.

You can be part of the DAO to participate in future decisions.

You will be able to expose your legendary and mythical players in the V-SPORT'S museum inside the metaverse.

You will be able to be part of the V-sports donation, where we will set up a soccer field for people in need to get off the streets and play.

V-SPORTS GAME:

V-soccer is a multiplayer play-to-win ("P2E") role-playing game in which players' unique NFT V-sports are used as in-game characters. Our mission is to make V-soccer first and foremost fun, and we primarily target mid to mid-level players who are looking for a unique experience in a friendly environment.

Players can participate in V-soccer in a variety of ways, as we have a free mode, a Campaign Mode and a versus mode. One of the key differentiators is that V-soccer is powered by NFT, where V-sport's NFT will act as the player's avatar in the game. There will only be 4,000 NFTs in this first World Cup-based season. As the company expands, there will be more minions through the various seasons we release.

In this game model, players can earn and get rewards through:

Campaign Mode missions, rewards such as unique NFT's, which you can trade in the markets.

Winning jerseys of different physical national teams.

Win games like FIFA 2023.

While many of the details of the mechanics and balance are subject to iterations and changes before being implemented in the final game, this game document should give the reader a good idea of where the V-sports team envisions the game to be when it is finally playable.

NFT SYSTEM IN THE GAME:

To play, players will need to validate the V-sports NFT in their various wallets, such as the Phantom or SolFlare wallets, and players will be able to use those V-sport NFTs as avatars for their characters. V-sport's NFT validations will allow players to accumulate all of their rewards.

V-soccer is an NFT-based game, and we encourage trading and exchanging V-sport's NFT for players to experience the breadth and depth we offer. At the same time, we would like players to be able to significantly monetize the time they have spent playing. The NFT's feature 3 different backgrounds primarily where you will see a difference in the skills and attributes of each player.

Each NFT comes with an amount of 15 dollars so you can play in the online mode against other players, if you run out there is the option to recharge that NFT through phantom wallet or directly with credit cards.

There is the option to lock your NFT in training mode for a certain amount of time, where you can earn different rewards.

CAMPAIGN MODE

Beginner players are encouraged to play first in the Campaign Mode, where they will be introduced to the world of V-sports and players will play individually with increasing difficulty levels. The PVE mode will be against the best players in the world, up to legendary players, increasing the difficulty level, while allowing players to earn rewards to improve their skills and better use their NFT characters.

After the player has gone through the Campaign Mode once, they can face the players again, but this time without rewards, just to improve. In Exploration Mode, players can go to all the areas they have previously visited for the story line.

Once you win the Campaign Mode you will have unique characters, powers and a high level of skill, plus rewards that are available throughout the matches. You will be ready to master the online versus mode and wait for the next season to master it again.

PVP MODE

In player versus player (PVP) battle mode, the game will track each player through the Matchmaking Rating (MMR) system, where each player's MMR will increase according to victories and achievement of objectives. To enter a match, the player will start from the lobby where players can select from their V-sport's NFT's in their game account, as well as the corresponding items to optimize their chances of winning. Once this is done, players will log into our system and play against players of similar MMR to their own.

Once a battle is over, the winning player gets the total loot. The MMR will also be adjusted according to the outcome of the battle.

Players who run away from the confrontation will lose what they charged.

The NFT'S have a deposit with which they will be able to play to test the game, once the deposit is finished, there is the option to recharge it through the phantom wallet or by credit card.
